Hi, Christina,

Would you please authorize the rush search for the following seqeunces: SEQ ID NO:2 [(1) resdiues 115-121, (2) resdiues 145-153, (3) resdiues 347-121, and (4) resdiues 54-140], SEQ ID NO: 6 (resdiues 2-45), and full-length sequences of SEQ ID NO: 3 (DNA) and SEQ ID NO:2 (polypeptide), against commercial **nucleic acid** and **interference** databases with at least 75 search results?

Very best,

Samuel Liu

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT   New nucleic acid that is a 5' expressed sequence tag (5' EST) for
PT   obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for
PT   diagnostic, forensic, gene therapy and chromosome mapping procedures.
XX
PS   Claim 1; SEQ ID NO 1651; 71pp + Sequence Listing; English.
XX
CC   The present sequence is one of a large number of 5' ESTs derived from
CC   mRNAs encoding secreted proteins. An ORF has been identified within the
CC   sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs
CC   derived from 30 different tissues. EST sequences usually correspond
CC   mainly to the 3' untranslated region (UTR) of the mRNA because they are
CC   often obtained from oligo-dT primed cDNA libraries. Such ESTs are not
CC   well suited for isolating cDNA sequences derived from the 5' ends of
CC   mRNAs and even in those cases where longer cDNA sequences have been
CC   obtained, the full 5' UTR is rarely included. 5' ESTs are derived from
CC   mRNAs with intact 5' ends and can therefore be used to obtain full length
CC   cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic,
CC   gene therapy and chromosome mapping procedures. They are used to obtain
CC   upstream regulatory sequences and to design expression and secretion
CC   vectors

PT   Isolated nucleic acids and polypeptides, useful for preventing diagnosing
PT   and treating e.g. leukemia, inflammation and immune disorders.
XX
PS   Claim 1; SEQ ID NO 12576; 1399pp + Sequence Listing; English.
XX
CC   The invention relates to human polynucleotides (AAI79941-AAI93841) and
CC   the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to
CC   cytokine, cell proliferation or cell differentiation or which may induce
CC   production of other cytokines in other cell populations. The
CC   polynucleotides and polypeptides are useful in gene therapy, vaccines or
CC   peptide therapy. The polypeptides have various cytokine-like activities,
CC   e.g. stem cell growth factor activity, haematopoiesis regulating
CC   activity, tissue growth factor activity, immunomodulatory activity and
CC   activin/inhibin activity and may be useful in the diagnosis and/or
CC   treatment of cancer, leukaemia, nervous system disorders, arthritis and
CC   inflammation. Note: The sequence data for this patent did not form part
CC   of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

CC   The invention relates to 971 novel human cDNA sequences (ADC29919-
CC   ADC30889)and the polypeptides they encode (ADC30890-ADC31860). The
CC   invention also relates to nucleic acid sequences over 99% identical with
CC   the novel human cDNAs. The invention additionally encompasses expression
CC   vectors and host cells comprising a nucleic acid of the invention; the
CC   recombinant production of a polypeptide of the invention; an antibody
CC   against a polypeptide of the invention; a method of detecting
CC   polynucleotides or polypeptides of the invention; and methods of
CC   identifying a compound which binds to a polypeptide of the invention. The
CC   invention further discloses methods of peventing, treating or
CC   ameliorating a medical condition; kits comprising polynucleotide probes
CC   and/or monoclonal antibodies for carrying out the methods of the
CC   invention; methods for the identification of compounds that modulate the
CC   expression or activity of the polynucleotide and/or polypeptide; and 767
CC   contig sequences corresponding to the cDNA sequences of the invention
CC   (ADC31861-ADC32627) and the polypeptides encoded by the contigs (ADC32628
CC   -ADC33394). The nucleic acids and polypeptides of the invention are
CC   useful in diagnostics, drug screening, forensics, gene mapping, in the
CC   identification of mutations responsible for genetic disorders or other
CC   traits, for assessing biodiversity, and in producing many other types of
CC   data and products dependent on DNA and amino acid sequences. They are
CC   also used for treating diseases such as Parkinson's disease, Alzheimer's
CC   disease and other neurodegenerative diseases, anaemia, platelet
CC   disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or
CC   cancer. The nucleic acids may also be used as hybridisation probes or
CC   primers, and in the recombinant production of a protein. The polypeptides
CC   are also useful in generating antibodies, as molecular weight markers,
CC   and as food supplements. The present sequence represents a human contig
CC   sequence used in an example of the invention. Note: The sequence data for
CC   this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT   Novel proteins used to treat inflammatory diseases, NF-kappaB related
PT   diseases and for improvement of anti-tumor treatments.
XX
PS   Claim 11; Page 45-46; 48pp; English.
XX
CC   This sequence represents the gene encoding human CD40 receptor
CC   interacting protein 4C4. The protein is a functional protein capable of
CC   interacting with the cytoplasmic domain of CD40 and/or other receptors of
CC   the tumour necrosis factor (TNF) receptor superfamily such as CD30 and
CC   TNF receptor I, where the protein has no homology to TNF receptor
CC   associated factor (TRAF)-proteins. The CD40 binding proteins can be used
CC   as modulators of the CD40 signalling pathway, especially to diagnose and
CC   treat TRAF-related, CD40-related, NF-kappaB related and/or Jun (kinase)-
CC   related diseases, and for the improvement of anti-tumour diseases.
CC   Diseases which may be treated include atherosclerosis, arthritis,
CC   multiple sclerosis, systemic lupus erythematosus, graft rejection, graft
CC   versus host disease, allergy, and autoimmune disease. The proteins can be
CC   used to sensitize tumour cells to anti-tumour treatments and to screen
CC   for compounds which interfere with the interaction of the proteins with
CC   other protein components of the TRAF, CD40 or NF-kappaB related pathway

PT   New microarray comprising probes for genes involved in
PT   psychoneuroendocrinimmune (PNI) activity, useful in diagnosing a
PT   condition associated with PNI activity, e.g., inflammatory or infectious
PT   diseases.
XX
PS   Claim 1; SEQ ID NO 664; 254pp; English.
XX
CC   The invention relates to a new microarray which comprises probes for
CC   genes involved in psychoneuroendocrinimmune (PNI) activity. The
CC   microarray is useful in diagnosing a condition associated with PNI
CC   activity, such as CFS, type-2 diabetes, allergic condition, inflammation,
CC   cancer and infection. The present sequence represents a
CC   psychoneuroendocrinimmune gene expressed sequence tag. Note the
CC   specificatio mentions SEQ ID NO of up to 3314 but only sequences up to
CC   SEQ ID NO 1829 are provided.

XX
CC   The present invention relates to the isolation of a human COASTER protein
CC   with several different amino acid sequences, and the polynucleotide
CC   sequences encoding them. The sequences of the invention can be used in a
CC   method of modulation of transcriptional activity promoted by a responsive
CC   nuclear receptor (e.g. a steroid receptor), and a coactivator (e.g. a
CC   COASTER protein). The COASTER protein is useful in the diagnosis of
CC   disorders involving changes in the coactivation process. The method of
CC   the invention is useful for determining the action of hormones and
CC   mechanisms for control of transcription of genes in general. The method
CC   is also useful for developing new medicines to specifically influence
CC   physiological processes related to the functioning of a nuclear receptor
CC   for therapeutic, diagnostic, cosmetic and contraceptive purposes. The
CC   method can be used for the treatment of hormone-stimulated tumour growth,
CC   male or female contraception, menopausal and post-menopausal disorders in
CC   women, heart diseases and for the treatment of aging due to reduced
CC   hormonal activity. The present sequence encodes human COASTER protein
CC   sequence #3

PT   Monitoring drug activities in vivo comprises comparing an expression
PT   profile of a gene in a peripheral blood sample of a patient before and
PT   after drug therapy.
XX
PS   Disclosure; SEQ ID NO 139; 136pp; English.
XX
CC   The invention relates to a method of monitoring drug activities in vivo
CC   by comparing an expression profile of at least one gene in a peripheral
CC   blood sample of a patient to a reference expression profile of the at
CC   least one gene, where the at least one gene is differentially expressed
CC   in peripheral blood mononuclear cells (PBMCs) of patients who have a non-
CC   blood disease and are subjected to a drug therapy as compared to PBMCs
CC   isolated from the patient before the drug therapy, and where the patient
CC   has the non-blood disease and is being treated by the drug therapy. The
CC   method, kit, and nucleic acid array are useful for monitoring drug
CC   activities in vivo. The drug is especially CCI-779, an ester analogue of
CC   the immunosuppressant rapamycin which is a potent inhibitor of the
CC   mammalian target of rapamycin (mTOR). This sequence represents a gene
CC   expressed in PBMC altered by the drug therapy. (Note: this sequence does
CC   no form part of the printed specification but was obtained in electronic
CC   format from WIPO at ftp.wipo.int/pub/published_pct_sequences/).

PT   Biomarkers useful for predicting or determining the response of a mammal
PT   to a cancer treatment comprising administration of a modulator of cyclin-
PT   dependent kinase activity.
XX
PS   Claim 5; SEQ ID NO 2360; 141pp; English.
XX
CC   This invention describes a novel method of predicting or determining
CC   whether a mammal will respond or is responding to an anti-cancer agent
CC   that modulates cyclin-dependent kinase (cdk) activity. The method
CC   comprises measuring the level of one or more biomarkers selected from
CC   2774 biomarkers given in the specification (nucleotide sequence SEQ ID
CC   NO:1246 (Genbank EST W28729) is especially preferred). The method of the
CC   invention is utilized in a kit for determining or predicting whether
CC   patient would be susceptible or resistant to treatment by an agent
CC   modulating cdk activity. The invention also describes a method for
CC   utilizing individualized genetic profiles for treating diseases and
CC   disorders based on patient's response and molecular level, specialized
CC   microarrays comprising the biomarkers described, antibodies directed
CC   against the biomarkers and a cell culture model to identify biomarkers.
CC   The cdk modulator is preferably N-5-[[5-(1,1-Dimethylethyl)-2-
CC   oxazolyl]methyl]thio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-
CC   tartaric acid salt. Note: The sequence data for this patent did not form
CC   part of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. This
CC   sequence encodes a biomarker used in the method of the invention.

XX
CC   The present invention relates to the isolation of a human COASTER protein
CC   with several different amino acid sequences, and the polynucleotide
CC   sequences encoding them. The sequences of the invention can be used in a
CC   method of modulation of transcriptional activity promoted by a responsive
CC   nuclear receptor (e.g. a steroid receptor), and a coactivator (e.g. a
CC   COASTER protein). The COASTER protein is useful in the diagnosis of
CC   disorders involving changes in the coactivation process. The method of
CC   the invention is useful for determining the action of hormones and
CC   mechanisms for control of transcription of genes in general. The method
CC   is also useful for developing new medicines to specifically influence
CC   physiological processes related to the functioning of a nuclear receptor
CC   for therapeutic, diagnostic, cosmetic and contraceptive purposes. The
CC   method can be used for the treatment of hormone-stimulated tumour growth,
CC   male or female contraception, menopausal and post-menopausal disorders in
CC   women, heart diseases and for the treatment of aging due to reduced
CC   hormonal activity. The present sequence encodes human COASTER protein
CC   sequence #4

CC   The invention relates to 971 novel human cDNA sequences (ADC29919-
CC   ADC30889)and the polypeptides they encode (ADC30890-ADC31860). The
CC   invention also relates to nucleic acid sequences over 99% identical with
CC   the novel human cDNAs. The invention additionally encompasses expression
CC   vectors and host cells comprising a nucleic acid of the invention; the
CC   recombinant production of a polypeptide of the invention; an antibody
CC   against a polypeptide of the invention; a method of detecting
CC   polynucleotides or polypeptides of the invention; and methods of
CC   identifying a compound which binds to a polypeptide of the invention. The
CC   invention further discloses methods of peventing, treating or
CC   ameliorating a medical condition; kits comprising polynucleotide probes
CC   and/or monoclonal antibodies for carrying out the methods of the
CC   invention; methods for the identification of compounds that modulate the
CC   expression or activity of the polynucleotide and/or polypeptide; and 767
CC   contig sequences corresponding to the cDNA sequences of the invention
CC   (ADC31861-ADC32627) and the polypeptides encoded by the contigs (ADC32628
CC   -ADC33394). The nucleic acids and polypeptides of the invention are
CC   useful in diagnostics, drug screening, forensics, gene mapping, in the
CC   identification of mutations responsible for genetic disorders or other
```

```
CC   traits, for assessing biodiversity, and in producing many other types of
CC   data and products dependent on DNA and amino acid sequences. They are
CC   also used for treating diseases such as Parkinson's disease, Alzheimer's
CC   disease and other neurodegenerative diseases, anaemia, platelet
CC   disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or
CC   cancer. The nucleic acids may also be used as hybridisation probes or
CC   primers, and in the recombinant production of a protein. The polypeptides
CC   are also useful in generating antibodies, as molecular weight markers,
CC   and as food supplements. The present sequence represents a human contig
CC   sequence used in an example of the invention. Note: The sequence data for
CC   this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 17121; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

CC The invention relates to 971 novel human cDNA sequences (ADC29919-
CC ADC30889)and the polypeptides they encode (ADC30890-ADC31860). The
CC invention also relates to nucleic acid sequences over 99% identical with
CC the novel human cDNAs. The invention additionally encompasses expression
CC vectors and host cells comprising a nucleic acid of the invention; the
CC recombinant production of a polypeptide of the invention; an antibody
CC against a polypeptide of the invention; a method of detecting
CC polynucleotides or polypeptides of the invention; and methods of
CC identifying a compound which binds to a polypeptide of the invention. The
CC invention further discloses methods of peventing, treating or
CC ameliorating a medical condition; kits comprising polynucleotide probes
CC and/or monoclonal antibodies for carrying out the methods of the
CC invention; methods for the identification of compounds that modulate the
CC expression or activity of the polynucleotide and/or polypeptide; and 767
CC contig sequences corresponding to the cDNA sequences of the invention
CC (ADC31861-ADC32627) and the polypeptides encoded by the contigs (ADC32628
CC -ADC33394). The nucleic acids and polypeptides of the invention are
CC useful in diagnostics, drug screening, forensics, gene mapping, in the
CC identification of mutations responsible for genetic disorders or other
CC traits, for assessing biodiversity, and in producing many other types of
CC data and products dependent on DNA and amino acid sequences. They are
CC also used for treating diseases such as Parkinson's disease, Alzheimer's
CC disease and other neurodegenerative diseases, anaemia, platelet
CC disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or
CC cancer. The nucleic acids may also be used as hybridisation probes or
CC primers, and in the recombinant production of a protein. The polypeptides
CC are also useful in generating antibodies, as molecular weight markers,
CC and as food supplements. The present sequence represents a specifically
CC claimed human cDNA sequence of the invention. Note: The sequence data for
CC this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The

PT New polynucleotide sequences obtained from various cDNA libraries, useful
PT as hybridization probes, as oligomers for PCR, for chromosome and gene
PT mapping, in the recombinant production of protein, or in generating
PT antisense DNA or RNA.
XX
PS Claim 1; SEQ ID NO 28032; 44pp; English.
XX
CC The invention relates to an isolated polynucleotide comprising any one of
CC 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
CC determined by the technique of SBH (sequencing by hybridisation). Also
CC included is a purified polypeptide comprising a sequence corresponding to
CC a reading frame of the novel polynucleotide. The nucleic acid sequences
CC are useful in diagnostics as expressed sequence tags (EST) for
CC identifying expressed genes or for physical mapping of the human genome,
CC in forensics, in assessing biodiversities, or in identifying mutations
CC responsible for genetic disorders and other traits. The nucleotide
CC sequences are also useful as hybridisation probes, as oligomers for PCR,
CC for chromosome and gene mapping, in the recombinant production of
CC protein, or in generating antisense DNA or RNA. The purified polypeptide
CC is useful for generating antibodies specific for it. The present sequence
CC is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20030073623

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 17122; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   New nucleic acid, and derived proteins, useful for diagnosis of bronchial
PT   cancer and in screening for therapeutic and diagnostic agents.
XX
PS   Claim 1; SEQ ID NO 23; 1381pp; German.
XX
CC   This invention relates to a novel isolated nucleic acid associated with
CC   bronchial cancer comprising 489 defined sequences given in the
CC   specification. The invention may be useful for the production of
CC   compounds with a cytostatic activity through the inhibition of expression
CC   or activity of tumour-associated proteins. The novel DNA sequences and
CC   the proteins/peptides encoded by them are used for detecting bronchial
CC   cancer or determining the risk of developing it and to screen for
CC   specific binding partners of the DNA or protein sequences, where the
CC   binding partners are potentially useful as agents for treating or
CC   diagnosing bronchial cancer. The DNA or protein sequences can also be
CC   used for prognosis, detection of metastases and for secondary treatment
CC   (of tumours that have been stabilised or are no longer detectable).
CC   Detecting abnormal expression of the DNA sequences provides early
CC   diagnosis of bronchial cancers. The present sequence is that of a novel
CC   bronchial cancer-associated human gene sequence of the invention.

PT   New recombinant DNA construct comprising a promoter positioned to provide
PT   for expression of a polynucleotide encoding a polypeptide from a
PT   microbial source, useful for producing plants with improved properties.
XX
PS   Claim 1; SEQ ID NO 33508; 122pp; English.
XX
CC   The invention relates to a recombinant DNA construct comprising a
CC   promoter functional in a plant cell, where the promoter is positioned to
CC   provide for expression of a polynucleotide encoding a polypeptide from a
CC   microbial source. The invention also relates to a transformed plant
CC   comprising the recombinant DNA construct and a method of producing a
CC   transformed plant having an improved property. The plant is a crop plant
CC   such as maize or soybean. The method of producing a transformed plant
CC   having an improved property comprises transforming a plant with the
CC   recombinant DNA construct and growing the transformed plant, where the
CC   polynucleotide or polypeptide is useful for improving plant properties.
CC   The recombinant DNA construct is useful for producing plants with
CC   improved plant properties, e.g. improved cold, heat or drought tolerance,
CC   tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC   increased resistance to plant disease, better growth rate by modification
CC   of the cell cycle pathway with plant growth regulators, increased rate of
CC   homologous recombination, modified seed oil or protein yield and/or
CC   content, improved yield by modification of carbohydrate, nitrogen or
CC   phosphorus use and/or uptake, by modification of photosynthesis or by
CC   providing improved plant growth and development under at least one stress
CC   condition, improved lignin production or improved galactomannan
CC   production. This sequence represents a bacterial polynucleotide used in
CC   the scope of the invention. Note: The sequence data for this patent did
CC   not form part of the printed specification but was obtained in electronic
CC   format from USPTO at seqdata.uspto.gov/sequence.html.

PT New isolated nucleic acid molecule, useful for drug screening and
PT toxicity assays or for assessing the impact, including toxicity, of a
PT compound, pharmaceutical agent or environmental pollutant on a cell or
PT living organism.
XX
PS Claim 1; SEQ ID NO 2524; 41pp; English.
XX
CC This invention is related to a novel isolated canine nucleic acid
CC sequences and the construction of canine microarrays containing a
CC significant portion of the canine genome. The isolated canine nucleic
CC acid sequences of the invention may be useful for drug screening and
CC toxicity assays. The invention is therefore useful for assessing the
CC impact, including toxicity, of a compound, pharmaceutical agent or
CC environmental pollutant on a cell or living organism. The methods are
CC useful for detecting genes that are up- or down-regulated in canines in a
CC disease state. The sequences are useful as diagnostic agents or markers
CC to detect a cellular response in a sample individually or as part of a
CC gene expression profile. It is also useful as a target for agents that
CC modulate gene expression or activity. The database is useful for
CC producing electronic Northerns that allow the user to determine the cell
CC type or tissue in which a given gene is expressed and to allow
CC determination of the abundance or expression level of a given gene in a
CC particular tissue or cell. The methods are useful for determining the
CC similarity of a toxic response to one or more individual compounds. The
CC methods are useful for predicting at least one toxic response or the
CC likelihood that a compound or test agent will induce various specific
CC pathologies such as those of the liver (liver necrosis, fatty liver
CC disease, protein adduct formation or hepatitis), those of the kidney,
CC heart, brain or testes, or other pathologies associated with at least one
CC of the toxins. The methods are also useful for predicting or elucidating
CC the potential cellular pathways influenced, induced or modulated by the
CC compound or test agent due to the similarity of the expression profile
CC compared to the profile induced by a known toxin. The present sequence is
CC that of a canine DNA sequence which was claimed for use during the
CC production of a canine microarray of the invention.

PT New polynucleotide sequences obtained from various cDNA libraries, useful
PT as hybridization probes, as oligomers for PCR, for chromosome and gene
PT mapping, in the recombinant production of protein, or in generating
PT antisense DNA or RNA.
XX
PS Claim 1; SEQ ID NO 5409; 44pp; English.
XX
CC The invention relates to an isolated polynucleotide comprising any one of
CC 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
CC determined by the technique of SBH (sequencing by hybridisation). Also
CC included is a purified polypeptide comprising a sequence corresponding to
CC a reading frame of the novel polynucleotide. The nucleic acid sequences
CC are useful in diagnostics as expressed sequence tags (EST) for
CC identifying expressed genes or for physical mapping of the human genome,
CC in forensics, in assessing biodiversities, or in identifying mutations
CC responsible for genetic disorders and other traits. The nucleotide
CC sequences are also useful as hybridisation probes, as oligomers for PCR,
CC for chromosome and gene mapping, in the recombinant production of

```
CC   protein, or in generating antisense DNA or RNA. The purified polypeptide
CC   is useful for generating antibodies specific for it. The present sequence
CC   is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030073623

XX
CC   The invention relates to an isolated polynucleotide comprising any one of
CC   38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
CC   determined by the technique of SBH (sequencing by hybridisation). Also
CC   included is a purified polypeptide comprising a sequence corresponding to
CC   a reading frame of the novel polynucleotide. The nucleic acid sequences
CC   are useful in diagnostics as expressed sequence tags (EST) for
CC   identifying expressed genes or for physical mapping of the human genome,
CC   in forensics, in assessing biodiversities, or in identifying mutations
CC   responsible for genetic disorders and other traits. The nucleotide
CC   sequences are also useful as hybridisation probes, as oligomers for PCR,
CC   for chromosome and gene mapping, in the recombinant production of
CC   protein, or in generating antisense DNA or RNA. The purified polypeptide
CC   is useful for generating antibodies specific for it. The present sequence
CC   is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030073623

PT   Isolated nucleic acid molecules encoding novel ovarian polypeptides,
PT   useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian
PT   cancer), immune disorders, cardiovascular disorders and neurological
PT   diseases.
XX
PS   Claim 1; SEQ ID NO 796; 2922pp; English.
XX
CC   The invention relates to 2175 novel human ovarian antigens (ABP41054-
CC   ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also
CC   encompasses polypeptides 90% identical and polynucleotides 95% identical
CC   to the sequences of the invention. The invention additionally relates to
CC   recombinant vectors and host cells comprising human ovarian antigen
CC   polynucleotides, antibodies against human ovarian antigens, and the use
CC   of ovarian antigen polynucleotides and polypeptides in diagnosing,
CC   treating, prognosing or preventing various ovary and/or breast-related
CC   disorders. Such conditions include ovarian cancer and breast cancer, and
CC   metastatic tumours of ovarian or breast origin, reproductive system
CC   disorders (e.g., infertility, disorders of pregnancy, anovulation,
CC   polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine
CC   disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic
CC   shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and
CC   vaginitis), immune disorders (e.g., congenital and acquired
CC   immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus),
CC   blood-related disorders (e.g., anaemia), cardiovascular disorders,
CC   respiratory disorders, neurological disorders, gastrointestinal disorders
CC   and urinary system disorders. Ovarian antigen polypeptides and
CC   polynucleotides may also be used in screening for compounds which
CC   modulate ovarian antigen expression or activity. The polynucleotides may
CC   further be used for gene therapy, chromosome mapping, in the
CC   identification of individuals and in forensic analysis, and the
CC   polypeptides may be used as food additives or to prepare antibodies
CC   useful in disease diagnosis, drug targeting and phenotyping. The present
CC   sequence represents cDNA encoding a human ovarian antigen of the
CC   invention. Note: The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PS   Claim 5; SEQ ID NO 70; 424pp; English.
XX
CC   The invention relates to a novel isolated polypeptide which is a human
CC   kinase and phosphatase (KPP). The KPP polypeptides, polynucleotides,
CC   agonists and antagonists are useful for diagnosing, treating or
CC   preventing cell proliferative disorders such as atherosclerosis,
CC   cirrhosis, hepatitis and cancer, developmental disorders e.g. mental
```

CC retardation, neurological disorders including Alzheimer's disease and
CC Parkinson's disease, autoimmune and inflammatory disorders such as
CC Crohn's disease and diabetes mellitus and finally, viral, bacterial,
CC fungal, parasitic, protozoan or helminthic infections. Furthermore, the
CC polynucleotides encoding KPP may be useful for creating transgenic
CC animals to model human disease, as well as during gene therapy
CC procedures. The current sequence is that of the human KPP cDNA of the
CC invention.

XX
CC The invention comprises the amino acid and coding sequences of novel
CC proteins. The DNA and protein sequences of the invention are useful as:
CC markers for tissues in which the corresponding protein is preferentially
CC expressed; as molecular weight markers on gels; as chromosome markers or
CC tags; to identify chromosomes or to map related gene positions; and to
CC compare with endogenous DNA sequences in patients to identify potential
CC genetic disorders. The present DNA sequence was used in the
CC exemplification of the invention.

XX
PT   New isolated polynucleotides and polypeptides, useful for treating, e.g.
PT   cancer, lung or liver fibrosis, arthritis, inflammatory bowel disease,
PT   Crohn's disease, rheumatoid arthritis, diabetes mellitus type 1 or graft
PT   versus host disease.
XX
PS   Example 2; SEQ ID NO 663; 591pp; English.
XX
CC   The present invention describes an isolated polynucleotide (I): (a)
CC   comprising a nucleotide sequence selected from SEQ ID NO:1-244; or (b)
CC   which encodes a polypeptide with biological activity, where the
CC   polynucleotide hybridises to (I) under stringent hybridisation conditions
CC   or has greater than 99% sequence identity with (I). (I) has respiratory,
CC   cytostatic, antiarthritic, antiinflammatory, gastrointestinal,
CC   antibacterial, immunosuppressive, antidiabetic and antirheumatic
CC   activities, and can be used in gene therapy. (I) can be used for
CC   generating polynucleotides encoding chimeric or fusion proteins and
CC   heterologous protein sequences. The polynucleotides can be used to
CC   express recombinant protein for analysis, characterisation or therapeutic
CC   use; as markers for tissues in which the corresponding protein is
CC   preferentially expressed; as molecular weight markers on gels; as
CC   chromosome markers or tags to identify chromosomes or to map related gene
CC   positions; to compare with endogenous DNA sequences in patients to
CC   identify potential genetic disorders; as probes to hybridise and discover
CC   genes, related DNA sequences; as a source of information to derive PCR
CC   primers for genetic fingerprinting; as a probe to subtract-out known
CC   sequences in the process of discovering other novel polynucleotides; for
CC   selecting and making oligomers for attachment to a gene chip or other
CC   support, including for examination of expression patterns; to raise anti-
CC   protein antibodies using DNA immunisation techniques; and as an antigen
CC   to raise anti-DNA antibodies or elicit another immune response. The
CC   polynucleotides and polypeptides can also be used as nutritional sources
CC   or supplements, e.g. as a protein or amino acid supplement, as a carbon
CC   source, as a nitrogen source or as a source of carbohydrates. The
CC   polynucleotides and polypeptides can also be used treat cancer. The
CC   compositions are useful for promoting better or faster closure of non-
CC   healing wounds, for the generation and regeneration of tissues, for gut
CC   protection or regeneration and treatment of lung or liver fibrosis,
CC   reperfusion injury in various tissues, and conditions resulting from
CC   systemic cytokine damage. The compositions can also be used to treat
CC   inflammatory conditions (e.g. arthritis, inflammatory bowel disease or
CC   Crohn's disease), sepsis, rheumatoid arthritis, diabetes mellitus type 1
CC   or graft versus host disease. The present sequence represents an
CC   expressed sequence tag (EST) derived nucleotide sequence from the present
CC   invention. N.B. The sequences for this patent were obtained from the
CC   USPTO web site from an equivalent US patent US20040048249A1.

PT   Nucleic acid vaccine capable of being high-effectively and safely
PT   expressed comprises a conventional nucleic acid vaccine plasmid and alpha
PT   virus replication unit NS1-NS4.
XX
PS   Example; Fig 1; 14pp; Chinese.
XX
CC   The present invention describes a nucleic acid vaccine which can be
CC   effectively safely expressed. The nucleic acid vaccine plasmid forming
CC   the nucleic acid vaccine is formed from a conventional nucleic acid
CC   vaccine plasmid and an alphavirus replication unit NS1-NS4 gene
CC   recombination. After having been injected into body, under the action of
CC   a CMV promoter, the nucleic acid vaccine can transcribe the NS1-NS4
CC   replication unit and RNA of its downstream target gene with high
CC   replication, and it possess high expression efficiency of its target
CC   antigen, and after its transcription in the cell and expression level has
CC   reach a certain high level, it can induce the cell transfected by
CC   performing a death process to form a self-destroying mechanism so as to
CC   effectively solve the safety problem of nucleic acid vaccines. The
CC   present sequence represents an alphavirus replication unit NS1-NS4 gene
CC   related nucleotide sequence, which is used in an example from the present
CC   invention

PT   New vector (EV) used to express an antigen for vaccination, e.g. against
PT   human immune deficiency virus.
XX
PS   Disclosure; Fig 3A-F; 60pp; English.
XX
CC   This invention describes the construction of a novel expression vector
CC   (EV) containing an alphavirus replicon having a heterologous splice site.
CC   The expression vector contains (i) a DNA molecule (I) complementary to at
CC   least part of an alphavirus RNA genome, and (ii) inserted into a region
CC   of (I) that is not essential for its replication, a heterologous DNA
CC   (II), under control of a promoter. (I) includes at least one heterologous
CC   splice site (HSS) to prevent aberrant RNA splicing of the alphavirus and
CC   is the complement of the complete alphavirus genomic region essential for
CC   replication of viral RNA. The expression vector is used to express (II)
CC   in humans or animals, e.g. to express an antigen for vaccination (against
CC   human immune deficiency virus) or to produce a therapeutically active
CC   protein or peptide. Introducing an HSS: (1) makes it more likely that any
CC   splicing will occur at this site, rather than at a cryptic splice site;
CC   (2) restores function of the alphavirus when eliminated, and (3) may
CC   improve transport of RNA from the nucleus

PT   Improved alphavirus vector containing DNA encoding a paramyxovirus
PT   protein.
XX
PS   Example 2; Fig 6; 61pp; English.
XX
CC   The present invention describes an improved alphavirus vector containing
CC   DNA encoding an immunogenic paramyxovirus protein and DNA to enhance the
CC   immunoprotective ability of the paramyxovirus protein in vivo. The vector
CC   comprises: (1) a first DNA sequence which is complementary to at least
CC   part of an alphavirus RNA genome and including the complement of the
CC   complete alphavirus RNA genome replication regions to permit in vivo
CC   replication; and (2) a second DNA sequence encoding a paramyxovirus
CC   protein or protein fragment that generates antibodies that specifically
CC   react with the paramyxovirus protein; where the second DNA sequence is
CC   inserted into a region of the first DNA sequence which is non-essential
CC   for replication, the first and second DNA sequences being under
CC   transcriptional control of a promoter. The vector is used to immunize a
CC   host against disease caused by infection with paramyxovirus, especially
CC   respiratory syncytial virus. Human RSV is a major pathogen responsible
CC   for severe respiratory tract infections in infants, young children and
CC   the institutionalized elderly. The vector provides a protective immune
CC   response using a lower dose and less time than vectors in US8476397 and
CC   US8896500. Additionally the vectors using native RSV F produce protective
CC   immune responses in the absence of pretreatment of the animal model with
CC   cardiotoxin, a material known to increase the uptake of DNA and enhance
CC   the immune response. The present sequence represents the SFV EcoRV-SpeI
CC   fragment ligated to the hepatitis delta ribozyme from an example from the
CC   present invention

PT Nucleic acid molecule encoding a fusion polypeptide that promotes
PT processing via the Major Histocompatibility Complex class I pathway
PT and/or promotes activity of an antigen presenting cell, useful as vaccine
PT for cancer and viral infections.
XX
PS Claim 32; Page 25-27; 127pp; English.
XX
CC The invention relates to a new nucleic acid molecule (I) encoding a
CC fusion polypeptide useful as a vaccine composition. (I) comprises a first
CC nucleic acid sequence encoding a first polypeptide or peptide that
CC promotes processing via the Major Histocompatibility Complex (MHC) class
CC I pathway (MHC-I-PP) and/or promotes development or activity of an
CC antigen presenting cell (APC). The second nucleic acid sequence is linked
CC in frame to the first nucleic acid sequence or to a linker nucleic acid
CC sequence and encodes an antigenic polypeptide or peptide. The methods and
CC compositions of the present invention are useful as therapeutic vaccine
CC for cancer and for major viral infections, such as hepatoma and cervical
CC cancer, that cause morbidity and mortality. They can also be used in
CC treating animal diseases, such as equine herpesvirus, bovine viruses,
CC Marek's disease, retroviral and lentiviral diseases and rabies, in the
CC veterinary medicine context. The present sequence represents the
CC nucleotide sequence of a pSCA1 suicide DNA vector

PT   New nucleic acid composition comprising a first nucleic acid vector
PT   encoding an antigenic polypeptide and a second nucleic acid vector
PT   encoding an anti-apoptotic polypeptide, useful as an immunogen for
PT   inhibiting the growth of a tumor.
XX
PS   Disclosure; SEQ ID NO 2; 158pp; English.
XX
CC   The invention relates to a novel nucleic acid composition useful as an
CC   immunogen. The composition comprises a combination of: a first nucleic
CC   acid vector comprising a first sequence encoding an antigenic polypeptide
CC   or peptide, and optionally, a second sequence linked to the first
CC   sequence and encoding an immunogenicity-potentiating polypeptide (IPP);
CC   and a second nucleic acid vector encoding an anti-apoptotic polypeptide.
CC   When the second vector is administered with the first vector to a
CC   subject, a T cell mediated immune response to the antigenic polypeptide
CC   or peptide is induced that is greater in magnitude and/or duration than
CC   an immune response induced by administration of the first vector alone.
CC   The invention further includes: a particle comprising a material that is
CC   suitable for introduction into a cell or an animal by particle
CC   bombardment, bound to which is the first and second vectors or
CC   composition; a pharmaceutical composition capable of inducing or
CC   enhancing an antigen specific immune response, comprising the particle
CC   and a carrier or an excipient; inducing or enhancing an antigen specific
CC   immune response in a subject; increasing the numbers of CD8+ CTLs
CC   specific for a selected desired antigen in a subject; and inhibiting the
CC   growth of a tumor in a subject. The nucleic acid composition is useful as
CC   an immunogen for inhibiting the growth of a tumor, hence it has
CC   cytostatic activity. This polynucleotide sequence represents an anti-
CC   apoptotic pSCA1 suicide vector DNA of the invention.

PT   Isolated nucleic acid molecules encoding an attB1, attB2, attP1, attP2,
PT   attL1, attL2, attR1, and attR2 nucleotide sequence useful for the
PT   recombinational cloning of polypeptides.
XX
PS   Disclosure; Fig 29; 459pp; English.
XX
CC   The present invention describes isolated nucleic acid molecules (I)
CC   encoding an attB1, attB2, attP1, attP2, attL1, attL2, attR1, and attR2
CC   nucleotide sequence. Also described are: (1) an isolated nucleic acid
CC   molecule (II) comprising one or more att recombination sites comprising
CC   at least one mutation in its core region that increases the specificity
CC   of interaction between the recombination site and a second att
CC   recombination site; and (2) an isolated nucleic acid molecule (III)
CC   comprising one or more mutated att recombination sites comprising at
CC   least one mutation in its core region that enhances the efficiency of
CC   recombination between a first nucleic acid molecule comprising the
CC   mutated att recombination site and a second nucleic acid molecule
CC   comprising a second recombination site that interacts with the mutated
CC   att recombination site. (I), (II), (III), primers, vectors and methods
CC   from the present invention are used for the recombinational cloning of
CC   nucleic acid molecules. They can be used for changing vectors, targeting
CC   gene products to intracellular locations, cleaving fusion tags from
CC   desired proteins, operably linking nucleic acid molecules of interest to
CC   regulatory genetic sequences, constructing genes for fusion proteins,
CC   changing copy number, changing replicons, cloning into phages and
CC   cloning. (I), (II), (III), host cells and vectors can be used in the
CC   production of polypeptides and antibodies. The present sequence is used
CC   in the exemplification of the present invention

PT   New nucleic acid composition comprising a first nucleic acid vector
PT   encoding an antigenic polypeptide and a second nucleic acid vector
PT   encoding an anti-apoptotic polypeptide, useful as an immunogen for
PT   inhibiting the growth of a tumor.
XX
PS   Disclosure; SEQ ID NO 25; 158pp; English.
XX
CC   The invention relates to a novel nucleic acid composition useful as an
CC   immunogen. The composition comprises a combination of: a first nucleic
CC   acid vector comprising a first sequence encoding an antigenic polypeptide
CC   or peptide, and optionally, a second sequence linked to the first
CC   sequence and encoding an immunogenicity-potentiating polypeptide (IPP);
CC   and a second nucleic acid vector encoding an anti-apoptotic polypeptide.
CC   When the second vector is administered with the first vector to a
CC   subject, a T cell mediated immune response to the antigenic polypeptide
CC   or peptide is induced that is greater in magnitude and/or duration than
CC   an immune response induced by administration of the first vector alone.
CC   The invention further includes: a particle comprising a material that is
CC   suitable for introduction into a cell or an animal by particle
CC   bombardment, bound to which is the first and second vectors or
CC   composition; a pharmaceutical composition capable of inducing or
CC   enhancing an antigen specific immune response, comprising the particle
CC   and a carrier or an excipient; inducing or enhancing an antigen specific
CC   immune response in a subject; increasing the numbers of CD8+ CTLs
CC   specific for a selected desired antigen in a subject; and inhibiting the
CC   growth of a tumor in a subject. The nucleic acid composition is useful as
CC   an immunogen for inhibiting the growth of a tumor, hence it has
CC   cytostatic activity. This polynucleotide sequence represents an anti-
CC   apoptotic vector pSCA1-E7/BCL-xL DNA of the invention.

PT Nucleic acid molecule encoding a fusion polypeptide that promotes
PT processing via the Major Histocompatibility Complex class I pathway
PT and/or promotes activity of an antigen presenting cell, useful as vaccine
PT for cancer and viral infections.
XX
PS Claim 37; Page 34-37; 127pp; English.
XX
CC The invention relates to a new nucleic acid molecule (I) encoding a
CC fusion polypeptide useful as a vaccine composition. (I) comprises a first
CC nucleic acid sequence encoding a first polypeptide or peptide that
CC promotes processing via the Major Histocompatibility Complex (MHC) class
CC I pathway (MHC-I-PP) and/or promotes development or activity of an
CC antigen presenting cell (APC). The second nucleic acid sequence is linked
CC in frame to the first nucleic acid sequence or to a linker nucleic acid
CC sequence and encodes an antigenic polypeptide or peptide. The methods and
CC compositions of the present invention are useful as therapeutic vaccine
CC for cancer and for major viral infections, such as hepatoma and cervical
CC cancer, that cause morbidity and mortality. They can also be used in
CC treating animal diseases, such as equine herpesvirus, bovine viruses,
CC Marek's disease, retroviral and lentiviral diseases and rabies, in the
CC veterinary medicine context. The present sequence represents the
CC nucleotide sequence of vector pSCA1-E7-Hsp70 comprising the human
CC papillomavirus (HPV) E7 antigenic protein and M. tuberculosis heat shock
CC protein 70 (Hsp70) fusion sequence

PT   Improved alphavirus vector containing DNA encoding a paramyxovirus
PT   protein.
XX
PS   Claim 19; Fig 3; 61pp; English.
XX
CC   The present invention describes an improved alphavirus vector containing
CC   DNA encoding an immunogenic paramyxovirus protein and DNA to enhance the
CC   immunoprotective ability of the paramyxovirus protein in vivo. The vector
CC   comprises: (1) a first DNA sequence which is complementary to at least
CC   part of an alphavirus RNA genome and including the complement of the
CC   complete alphavirus RNA genome replication regions to permit in vivo
CC   replication; and (2) a second DNA sequence encoding a paramyxovirus
CC   protein or protein fragment that generates antibodies that specifically
CC   react with the paramyxovirus protein; where the second DNA sequence is
CC   inserted into a region of the first DNA sequence which is non-essential
CC   for replication, the first and second DNA sequences being under
CC   transcriptional control of a promoter. The vector is used to immunize a
CC   host against disease caused by infection with paramyxovirus, especially
CC   respiratory syncytial virus. Human RSV is a major pathogen responsible
CC   for severe respiratory tract infections in infants, young children and
CC   the institutionalized elderly. The vector provides a protective immune
CC   response using a lower dose and less time than vectors in US8476397 and
CC   US8896500. Additionally the vectors using native RSV F produce protective
CC   immune responses in the absence of pretreatment of the animal model with
CC   cardiotoxin, a material known to increase the uptake of DNA and enhance
CC   the immune response. The present sequence represents a specifically
CC   claimed plasmid pMP44 nucleotide sequence from the present invention

PT   New nucleic acid, useful for preparing a composition for treating an
PT   infection caused by Cryptococcus neoformans.
XX
PS   Claim 2; SEQ ID NO 2316; 136pp; English.
XX
CC   The invention relates to a novel purified or isolated Cryptococcus
CC   neoformans nucleic acid molecule comprising a sequence encoding a
CC   polypeptide comprising a sequence not given in the specification. A
CC   polynucleotide of the invention has fungicide activity, and may have a
CC   use in gene therapy. The nucleic acid is useful for preparing a
CC   composition for treating an infection caused by Cryptococcus neoformans.
CC   The present sequence represents a C. neoformans sequence of the
CC   invention. Note: The sequence data for this patent is not represented in
CC   the printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pat_sequences.

CC   polypeptide comprising a sequence not given in the specification. A
CC   polynucleotide of the invention has fungicide activity, and may have a
CC   use in gene therapy. The nucleic acid is useful for preparing a
CC   composition for treating an infection caused by Cryptococcus neoformans.
CC   The present sequence represents a C. neoformans sequence of the
CC   invention. Note: The sequence data for this patent is not represented in
CC   the printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pat_sequences.

PT   New composition comprising two or more isolated polypeptides, useful for
PT   preparing a medicament for treating pain in an animal.
XX
PS   Claim 1; Page; 1017pp; English.
XX
CC   The invention discloses a composition comprising two or more isolated rat
CC   or human polynucleotides or a polynucleotide which represents a fragment,
CC   derivative or allelic variation of the nucleic acid sequence. Also
CC   claimed are a vector comprising the novel polynucleotide, a host cell
CC   comprising the vector, a method for identifying a nucleotide sequence
CC   which is differentially regulated in an animal subjected to pain and a
CC   kit to perform the method, an array, a method for identifying an agent
CC   that increases or decreases the expression of the polynucleotide sequence
CC   that is differentially expressed in neuronal tissue of a first animal
CC   subjected to pain, a method for identifying a compound which regulates
CC   the expression of a polynucleotide sequence which is differentially
CC   expressed in an animal subjected to pain, a method for identifying a
CC   compound that regulates the activity of one or more of the
CC   polynucleotides, a method for producing a pharmaceutical composition, a
CC   method for identifying a compound or small molecule that regulates the
CC   activity in an animal of one or more of the polypeptides given in the
CC   specification, a method for identifying a compound useful in treating
CC   pain and a pharmaceutical composition comprising the one or more
CC   polypeptides or their antibodies. The polynucleotide or the compound that
CC   modulates its activity is useful for preparing a medicament for treating
CC   pain (e.g. spinal segmental nerve injury (Chung), chronic constriction
CC   injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene
CC   therapy). The sequence presented is a rat DNA (shown in Table 2 of the
CC   specification) which encodes one of the polypeptides of the invention
CC   which is differentially expressed during pain. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic form directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT   New composition comprising cDNAs that are differentially expressed in
PT   brain disorders, useful for diagnosing or treating Alzheimer's disease.
```

```
XX
PS   Claim 1; SEQ ID NO 95; 223pp; English.
XX
CC   The invention relates to a new composition comprising ADI61633-
CC   ADI61770and their complements that are cDNAs differentially expressed in
CC   brain disorders. Also included are a high throughput method for detecting
CC   differential expression of one or more cDNAs in a sample containing
CC   nucleic acids and a high throughput method for screening a library of
CC   molecules or compounds to identify a ligand that specifically binds a
CC   cDNA. The expression of the each of the cDNAs is downregulated at least
CC   two-fold in the brain of the subjects with Alzheimer's disease (ADI61633-
CC   ADI61727) or upregulated at least two fold in Alzheimer's disease
CC   (ADI61728-ADI61770). The composition is useful for diagnosing or treating
CC   Alzheimer's disease. The present sequence is a cDNA downregulated at
CC   least two-fold in the brain of the subjects with Alzheimer's disease.

PT   Composition useful for diagnosis, staging, treating or monitoring
PT   treatment of a subject with a brain disorder, comprises several cDNAs
PT   that are differentially expressed in brain disorders.
XX
PS   Claim 1; SEQ ID NO 95; 231pp; English.
XX
CC   The invention relates to a composition (I) for the diagnosis, staging,
CC   treatment or for the monitoring of treatment of a subject with a brain
CC   disorder. (I) comprises several cDNAs that are differentially expressed
CC   in brain disorders and chosen from any one of 138 nucleotide sequences of
CC   AEA43798-AEA43935, or their complements. Also described: (1) a high
CC   throughput method for detecting differential expression of one or more
CC   cDNAs in a sample containing nucleic acids; (2) an isolated cDNA (II)
CC   selected from AEA43812, AEA43813, AEA43830, AEA43831, AEA43855, AEA43856,
CC   AEA43883 and AEA43923; (3) an expression vector (III) containing (II);
CC   (4) a host cell (IV) containing (III); (5) a protein (V) produced using
CC   (IV); and (6) a pharmaceutical composition comprising (V). (I) is useful
CC   for a high throughput method of screening a library of molecules or
CC   compounds to identify a ligand which specifically binds a cDNA, where the
CC   method involves combining (I) with the library of molecules or compound
CC   under conditions to allow specific binding and detecting specific binding
CC   between each cDNA and a molecule or compound. (IV) is useful for
CC   producing a protein, which involves culturing (IV) under conditions for
CC   the expression of the protein and recovering the protein from the
CC   culture. (V) is useful for high throughput method for screening a library
CC   of molecules or compounds to identify a ligand which specifically binds
CC   (V), where the method involves combining (V) or its portion with the
CC   library of molecules or compound under conditions to allow specific
CC   binding and detecting specific binding between (V) and a molecule or
CC   compound. (V) is useful for purifying a ligand from a sample, which
CC   involves combining (V) or its portion with the sample under conditions to
CC   allow specific binding, recovering the bound protein and separating the
CC   protein from ligand. (V) is also useful for producing an antibody, which
CC   involves immunizing an animal with (V) or its portion under conditions to
CC   elicit an antibody response, isolating animal antibodies and screening
CC   the isolated antibodies with the protein. (II) is useful in gene therapy
CC   for the treatment or prevention of conditions and disorders associated
CC   with immune response. The present sequence represents a human cDNA
CC   sequence which is differentially expressed in brain tissues, which is
CC   used in the exemplification of the present invention.

PT   New polynucleotide and polypeptides, useful for treatment and diagnosis
PT   of Alzheimer's, Parkinson's, Huntington's, amylotrophic lateral
PT   sclerosis, immune deficiencies, cancer, autoimmune disorders, multiple
PT   sclerosis, diabetes and allergies.
XX
PS   Claim 22; SEQ ID NO 164; 284pp + Sequence Listing; English.
XX
CC   The invention relates to an isolated polynucleotide (I) comprising one of
CC   245 sequences (ABQ93288-ABQ93532). Treating a condition comprising
CC   administering to a mammalian subject a composition comprising the protein
CC   (II) encoded by (I) (ABP62809-ABP63053) or an antibody (III) to (II).
CC   (I), (II) and (III) are useful for diagnostic evaluation of disorders.
CC   (I) is useful for gene therapy of diseases and (II) can be used for
CC   therapeutic treatment. Diseases that may be treated include wound healing
CC   and tissue repair, burns, central nervous system disorders (e.g.
CC   Alzheimer's, Parkinson's, Huntington's and amylotrophic lateral
CC   sclerosis), immune deficiencies, cancer, autoimmune disorders, multiple
CC   sclerosis, diabetes and allergies. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at

PT   Detecting granulocyte activation by detecting differential expression of
PT   genes associated with granulocyte activation, which serves as diagnostic
PT   markers that is useful for monitoring disease states and drug toxicity.
XX
PS   Claim 1; SEQ ID NO 25; 114pp; English.
XX
CC   The invention relates to detecting (M1) granulocyte (GC) activation
CC   (GCA), by detecting the level of expression of gene(s) (Gs) identified by
CC   DNA chip analysis as given in the specification, and comparing the
CC   expression level to an expression level in an unactivated GC, where
CC   differential expression of Gs is indicative of GCA. Also included are
CC   modulating (M2) GA by contacting GC with an agent that alters the
CC   expression of at least one gene in Gs; (2) screening (M3) for an agent
CC   capable of modulating GCA or an inflammation (especially chronic) in a
CC   tissue, an allergic response in a subject, exposure of a subject to a
CC   pathogen or sterile inflammatory disease using the gene expression
CC   profile; (3) detecting (M4) an inflammation (especially chronic) in a
CC   tissue, an allergic response in a subject, exposure of a subject to a
CC   pathogen or sterile inflammatory disease, by detecting the level of
CC   expression in a sample of the tissue of gene(s) from Gs, where the level
CC   of expression of the gene is indicative of inflammation; (4) treating
CC   (M5) an inflammation (especially chronic) or in a tissue, an allergic
CC   response in a subject, exposure of a subject to a pathogen or sterile
CC   inflammatory disease, by contacting a tissue having inflammation with an
CC   agent that modulates the expression of gene(s) from Gs in the tissue. M1
CC   is useful for detecting GCA; M2 is useful for modulating GA; M3 is useful
CC   for screening an agent capable of modulating GCA preferably in an
CC   inflammation in a tissue; M4 is useful for detecting an inflammation
CC   (especially chronic) in a tissue, an allergic response in a subject,
CC   exposure of a subject to a pathogen or sterile inflammatory disease (e.g.
CC   psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis,
CC   cardiac reperfusion injury, renal reperfusion injury, ARDS, adult
CC   respiratory distress syndrome, inflammatory bowel disease, Crohn's
CC   disease, ulcerative colitis, periodontal disease; also bacterial
CC   infection, viral infection, parasitic infection, protozoal infection,
CC   fungal infection and M5 is useful for treating one of the above
CC   conditions. The present sequence represents a gene differentially
CC   expressed in granulocytes. Note: The sequence data for this patent did
CC   not form part of the printed specification, but was obtained in
CC   electronic format directly from WIPO at

PS   Claim 23; SEQ ID NO 236; 176pp; English.
XX
CC   This invention relates to a method of differentially modulating the
CC   growth or differentiation of blood endothelial cells (BEC) or lymphatic
CC   endothelial cells (LEC) comprises contacting endothelial cells with a
CC   composition comprising an agent that differentially modulates blood or
CC   lymphatic endothelial cells. Treating hereditary lymphoedema comprises
CC   identifying a human subject with lymphoedema and with a mutation in at
CC   least one allele of a gene encoding a LEC protein, where the mutation
CC   correlates with lymphoedema in human subjects, and with the proviso that
CC   the LEC protein is not VEGFR-3; and administering to the subject a
CC   composition comprising a lymphatic growth agent selected from VEGF-C or
CC   VEGF-D polypeptides and polynucleotides. The invention may be useful for
CC   the development of compounds with an antiangiogenic, cytostatic,
```

```
CC   vasotropic or antiinflammatory activity or for gene therapy. The method
CC   is useful in modulating the growth or differentiation of blood
CC   endothelial cells or lymphatic endothelial cells, in treating hereditary
CC   lymphoedema, in screening for an endothelial cell disorder or
CC   predisposition to the disorder or in monitoring the efficacy or toxicity
CC   of a drug on endothelial cells. The agent is useful in manufacturing a
CC   medicament for the differential modulation of blood vessel endothelial
CC   cell or lymphatic vessel endothelial cell growth or differentiation. The
CC   lymphatic growth agent may also be used in manufacturing a medicament for
CC   the treatment of hereditary lymphoedema resulting from a mutation in a
CC   LEC gene or of other diseases involving the lymphatic vessels, such as
CC   various inflammatory diseases and cancer metastasis via the lymphatic
CC   system. The present sequence is that of a human LEC/BEC differentially
CC   expressed gene which is related to the method of the invention.Note: This
CC   sequence does not appear in the specification but was obtained by the
CC   indexer using the source data given in table 14 of the specification.

XX
CC   The invention relates to a novel method for detecting soft tissue sarcoma
CC   which comprises obtaining a first soft tissue sample from an individual
CC   and a normal soft tissue sample from the same or different individual,
CC   determining the expression of a gene in both samples and comparing the
CC   expression of the gene in both soft tissue samples, where a higher level
CC   of protein expression in the first soft tissue sample indicates the
CC   presence of soft tissue sarcoma. The method of the invention has
CC   cytostatic applications and may be useful for detecting soft tissue
CC   sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC   acid sequences may be useful in diagnostic and screening applications.
CC   The current sequence is that of a human soft tissue sarcoma-upregulated
CC   DNA of the invention. The current sequence is not shown within the
CC   specification per se but was submitted in CD format by the inventor.

PT   New bleomycin gene cluster components useful for peptide and/or
PT   polyketide metabolites, especially bleomycin, production and for
PT   chemically modifying biological molecules.
XX
PS   Claim 8; Page 97-136; 162pp; English.
XX
CC   The present sequence represents the BLM (Bleomycin) gene cluster,
CC   containing open reading frames (ORFs) 8-30. The proteins encoded by the
CC   gene cluster are useful for producing peptides and/or polyketide
CC   metabolites, especially bleomycin or bleomycin analogues. They are also
CC   useful for chemically modifying biological molecules to produce branched
CC   methyl groups, and for coupling amino acids and fatty acids. They may be
CC   reacted with an apo-carrier protein and coenzyme A to produce a holo-
CC   carrier protein. The BLM gene cluster or catalytic domains can be used
CC   individually or collectively to produce thiazolidine, thiazoline,
CC   bithiazoline and bithiazoline-containing microbial metabolites. The BLM
CC   gene cluster may also be used to produce sugars

PT   Southern oligomycin biosynthetic gene cluster.
XX
PS   Claim 1; SEQ ID NO 1; 132pp; Chinese.
XX
CC   The present invention relates to a novel nanoligomycin biological
CC   synthetic gene cluster, belonging to the field of gene technology. The
CC   whole nanoligomycin biological synthetic gene cluster has 13 genes
CC   including polyketone synthase genes (7 genes of nlm A1, nlmA2, nlmA3,
CC   nlmA4, nlm A5, nlmA6 and nlmA7), modification genes of nanoligomycin (2
CC   genes of nlm B and nlmOI), nanoligomycin transposase genes (2 genes of
CC   nlmTI and nlmTII), a regulating gene of nanoligomycin (nlmRI) and a
CC   nanoligomycin precursor synthetic gene (ccrA). The genes, proteins and
```

```
CC   antibodies provided by the invention also can be used to seek and develop
CC   compounds and proteins which can be used in medicine, industry and
CC   agriculture. The present sequence is that of the Streptomyces
CC   nanchangensis nanoligomycin gene cluster of the invention.

PT   Detection of Epstein Barr virus nucleic acid in isolated sample, by
PT   contacting sample with probe capable of binding to BZLF 1 gene sequence
PT   of Epstein Barr virus and producing signal, and detecting signal
PT   produced.
XX
PS   Disclosure; SEQ ID NO 8; 96pp; English.
XX
CC   The invention relates to detection of Epstein Barr virus nucleic acid in
CC   an isolated sample, involving contacting the sample with a probe, where
CC   the probe binds to a target region having a BZLF1 gene (encoding the
CC   ZEBRA protein), or its homologue or its complementary strand, which
CC   binding provides a detectable signal, and detecting the signal. Also
CC   included are a probe suitable for use in the method, a pair of
CC   oligonucleotide primers comprising forward and reverse primers for use in
CC   the method, a kit for detection of Epstein Barr virus nucleic acid,
CC   comprising the primers and probes and a DNA array comprising an
CC   immobilised nucleic acid probe that binds to the target region. The
CC   method is useful for detecting/and or quantifying Epstein Barr virus
CC   nucleic acid in an isolated sample. The probe is useful for quantifying
CC   Epstein Barr viral load in a first isolated sample and in an in vitro
CC   method of monitoring drug efficacy for alleviating Epstein Barr virus
CC   infection or an Epstein Barr virus induced medical condition (e.g.
CC   infectious mononucleosis (glandular fever), Burkitt's lymphoma, Hodgkin's
CC   disease, and post-transplant lymphoproliferative disorders). In the
CC   method, the target nucleic acid sequence proves to be beneficial as it
CC   does not encode a surface protein and thus are not susceptible to immune
CC   selection pressure. The present sequence is the genome of African Green
CC   monkey herpes virus (an Epstein Barr-type virus) which contains a
CC   homologue of BZLF1.

PT   Biosynthesis gene cluster of Nanchang.
XX
PS   Disclosure; SEQ ID NO 1; 338pp; Chinese.
XX
CC   The invention describes a biosynthetic gene cluster of Nanchangmycin
CC   containing 30 genes including 11 polyketone synthase genes, 4 modifying
CC   genes, 6 biosynthetic genes of its deoxysugar, and 9 regulating genes.
CC   This sequence represents the Nanchangmycin biosynthetic gene cluster of
CC   the invention.

PT New isolated polynucleotides and polypeptides, useful for treating, e.g.
PT cancer, lung or liver fibrosis, arthritis, inflammatory bowel disease,
PT Crohn's disease, rheumatoid arthritis, diabetes mellitus type 1 or graft
PT versus host disease.
XX
PS Claim 1; SEQ ID NO 191; 591pp; English.
XX
CC The present invention describes an isolated polynucleotide (I): (a)
CC comprising a nucleotide sequence selected from SEQ ID NO:1-244; or (b)
CC which encodes a polypeptide with biological activity, where the
CC polynucleotide hybridises to (I) under stringent hybridisation conditions
CC or has greater than 99% sequence identity with (I). (I) has respiratory,
CC cytostatic, antiarthritic, antiinflammatory, gastrointestinal,
CC antibacterial, immunosuppressive, antidiabetic and antirheumatic
CC activities, and can be used in gene therapy. (I) can be used for
CC generating polynucleotides encoding chimeric or fusion proteins and
CC heterologous protein sequences. The polynucleotides can be used to
CC express recombinant protein for analysis, characterisation or therapeutic
CC use; as markers for tissues in which the corresponding protein is
CC preferentially expressed; as molecular weight markers on gels; as
CC chromosome markers or tags to identify chromosomes or to map related gene
CC positions; to compare with endogenous DNA sequences in patients to
CC identify potential genetic disorders; as probes to hybridise and discover
CC genes, related DNA sequences; as a source of information to derive PCR
CC primers for genetic fingerprinting; as a probe to subtract-out known
CC sequences in the process of discovering other novel polynucleotides; for
CC selecting and making oligomers for attachment to a gene chip or other
CC support, including for examination of expression patterns; to raise anti-
CC protein antibodies using DNA immunisation techniques; and as an antigen
CC to raise anti-DNA antibodies or elicit another immune response. The
CC polynucleotides and polypeptides can also be used as nutritional sources
CC or supplements, e.g. as a protein or amino acid supplement, as a carbon
CC source, as a nitrogen source or as a source of carbohydrates. The
CC polynucleotides and polypeptides can also be used treat cancer. The
CC compositions are useful for promoting better or faster closure of non-
CC healing wounds, for the generation and regeneration of tissues, for gut
CC protection or regeneration and treatment of lung or liver fibrosis,
CC reperfusion injury in various tissues, and conditions resulting from
CC systemic cytokine damage. The compositions can also be used to treat
CC inflammatory conditions (e.g. arthritis, inflammatory bowel disease or
CC Crohn's disease), sepsis, rheumatoid arthritis, diabetes mellitus type 1
CC or graft versus host disease. The present sequence represents a novel
CC human polynucleotide sequence from the present invention. N.B. The
CC sequences for this patent were obtained from the USPTO web site from an
CC equivalent US patent US20040048249A1.

PT cDNA encoding p62 and p160 and corresponding proteins - used in the
PT treatment of autoimmune disease and for T and B cell proliferation, e.g.
PT for treatment of tumours.
XX
PS Claim 82; Fig 10; 175pp; English.
XX
CC This cDNA sequence encodes a novel p160 (160.2) which is capable of
CC activating transcription of a variety of genes upon activation of p62 and

```
CC   is capable of binding to the p62/p56lpk complex to modulate Lck function
CC   in a manner similar to p62. The genes transcribed in response to p160
CC   activation likely include those of which are involved in T or B cell
CC   development/differentiation, T or B cell activation or production of T or
CC   B cell specific factors e.g. lymphokines or antibodies. This p160
CC   polypeptide is also a substrate for serine/threonine kinase activity.
CC   p160 polypeptides can modulate degradation of cellular proteins e.g. cell
CC   cycle regulatory proteins stimulating expression of cell cycle dependent
CC   kinase inhibitors and arresting cell cycle progression at specific
CC   boundaries to thereby modulate cell proliferation. As p160 boosts B cell
CC   response it may be used to treat disorders where this is beneficial, e.g.
CC   infections by pathogenic microorganisms. p160 can be used to expand T
CC   cell populations for treating infectious diseases or cancer and p160
CC   inhibitors could reduce B or T cell responses and may be used to treat a
CC   variety of autoimmune diseases, e.g. diabetes mellitus, arthritis,
CC   multiple sclerosis allergic reactions, Crohn's diseases etc

PT Novel polyene polyketide or its salt useful for treating bacterial
PT infection, cancer or acute or chronic inflammation.
XX
PS Claim 40; SEQ ID NO 44; 374pp; English.
XX
CC The invention relates to a novel polyene polyketide compound, its salt
CC having a structural formula (I), prodrugs, and derivatives which are
CC shown to have antibiotic activity. The invention further comprises: a
CC composition comprising the compound or its salt, together with a carrier;
CC a method of producing the compound, which involves culturing
CC Amycolatopsis orientalis strain in a nutrient medium comprising one or
CC more source of carbon and nitrogen atoms, and isolating the compound; an
CC A. orientalis having the IDAC Accession No. 220604-01; an isolated
CC purified or enriched nucleic acid encoding the polyketide synthase for
CC producing the compound; an expression vector comprising the nucleic acid;
CC an isolated host cell transformed with the vector; an isolated or
CC purified polyketide synthase for producing the compound; an isolated or
CC purified ketosynthase domain for producing the compound; an isolated or
CC purified acyl transferase domain for producing the compound; an isolated
CC or purified acyl carrier protein domain for producing the compound; an
CC isolated or purified dehydratase domain for producing the compound; an
CC isolated or purified ketoreductase domain for producing the compound; an
CC isolated or purified enoyl reductase domain for producing the compound;
CC an isolated or purified thioesterase domain for producing the compound; a
CC method for producing PS, involves introducing into a host cell a nucleic
CC acid encoding the polypeptide, where the nucleic acid is operably linked
CC to a promoter; and a cosmid deposited under IDAC Accession No. 050903-01,
CC 050903-02, 050903-03 or 050903-04. The novel compound and its composition
CC have antibacterial, cytostatic and antiinflammatory activities. The novel
CC compound or its composition is useful for treating bacterial infection
CC and for treating cancer or acute or chronic inflammation. This sequence
CC represents an A. orientalis polyene polyketide open reading frame derived
CC protein of the invention.

PT   Novel polyene polyketide or its salt useful for treating bacterial
PT   infection, cancer or acute or chronic inflammation.
XX
PS   Example 1; SEQ ID NO 24; 374pp; English.
XX
CC   The invention relates to a novel polyene polyketide compound, its salt
CC   having a structural formula (I), prodrugs, and derivatives which are
CC   shown to have antibiotic activity. The invention further comprises: a
CC   composition comprising the compound or its salt, together with a carrier;
CC   a method of producing the compound, which involves culturing
CC   Amycolatopsis orientalis strain in a nutrient medium comprising one or
CC   more source of carbon and nitrogen atoms, and isolating the compound; an
CC   A. orientalis having the IDAC Accession No. 220604-01; an isolated
CC   purified or enriched nucleic acid encoding the polyketide synthase for
CC   producing the compound; an expression vector comprising the nucleic acid;
CC   an isolated host cell transformed with the vector; an isolated or
CC   purified polyketide synthase for producing the compound; an isolated or
CC   purified ketosynthase domain for producing the compound; an isolated or
CC   purified acyl transferase domain for producing the compound; an isolated
CC   or purified acyl carrier protein domain for producing the compound; an
CC   isolated or purified dehydratase domain for producing the compound; an
CC   isolated or purified ketoreductase domain for producing the compound; an
CC   isolated or purified enoyl reductase domain for producing the compound;
CC   an isolated or purified thioesterase domain for producing the compound; a
CC   method for producing PS, involves introducing into a host cell a nucleic
CC   acid encoding the polypeptide, where the nucleic acid is operably linked
CC   to a promoter; and a cosmid deposited under IDAC Accession No. 050903-01,
CC   050903-02, 050903-03 or 050903-04. The novel compound and its composition
CC   have antibacterial, cytostatic and antiinflammatory activities. The novel
CC   compound or its composition is useful for treating bacterial infection
CC   and for treating cancer or acute or chronic inflammation. This
CC   polynucleotide sequence represents A. orientalis contiguous DNA used in
CC   the production of the novel polyene polyketide compound of the invention.

PT   Composition for therapy and diagnosis of ovarian cancer comprising
PT   polypeptide of a ovarian tumor polypeptide, polynucleotide encoding
PT   polypeptide, antibody specific to polypeptide or T cell expressing
PT   polypeptide.
XX
PS   Claim 1; SEQ ID NO 5034; 489pp; English.
XX
CC   The present invention describes a composition (I) comprising: carriers
CC   and immunostimulants; and a polypeptide (II) of a ovarian tumour
CC   polypeptide encoded by a polynucleotide (III) having a cDNA sequence (S1)
CC   from the 10912 nucleotide sequences as given in ABL77023 to ABL87934,
CC   (III) encoding (II) having a sequence (S2), a T cell population of (II),
CC   or antigen presenting cells that express (II). (I) has cytostatic
CC   activity. An oligonucleotide (IV) that hybridises to (S1) can be used for
CC   detecting ovarian cancer in a patient's biological sample preferably
CC   serum or ovarian tissue. The method comprises contacting a biological
CC   sample from a patient with (IV), detecting the amount of polynucleotide
CC   hybridising to (IV) and comparing the amount to a predetermined cutoff
CC   value and thereby detecting ovarian cancer in the patient, where the
CC   amount of polynucleotide hybridising to (IV) is detected preferably by
CC   polymerase chain reaction (PCR). (I) comprising (III) and/or (II) is
CC   useful for stimulating and/or expanding T cells specific for an ovarian
CC   tumour protein comprising contacting T cells with (III) or (II). (III) is
CC   useful in design and preparation of ribozyme molecules for inhibiting
CC   expression of the tumour polypeptides and proteins in tumour cells; and
CC   to isolate a full length gene from a suitable library e.g., a tumour cDNA
CC   library using well known techniques

PT   New isolated polynucleotides, which are differentially expressed in colon
PT   cancer cell, useful for treating cancer, e.g. colon cancer, breast
PT   cancer, or pancreatic cancer.
XX
PS   Claim 1; SEQ ID NO 7425; 97pp; English.
XX
CC   The invention relates to 9672 polynucleotides (ACL53866-ACL63537) which
CC   are differentially expressed in colon cancer cells. The invention also
CC   relates to vectors and host cells comprising a differentially expressed
CC   polynucleotide of the invention; a method for detecting a cancerous cell
CC   by detection of a gene product of the polynucleotides; a method for
CC   inhibiting a cancerous phenotype of a cell by inhibiting a gene product
CC   of the polynucleotides; a method of treating an individual with cancer by
CC   administration of a modulator of a gene product of the polynucleotides;
CC   and an isolated antibody that specifically binds to a polypeptide encoded
CC   by one of the 9672 polynucleotides. The polynucleotides, polypeptides,
CC   antibodies, and methods are useful for the detection of cancerous cells;
CC   for the diagnosis, prognosis and management of cancer; for the
CC   identification of agents that modulate the phenotype of cancerous cells;
CC   for the identification of therapeutic targets for cancer chemotherapy;
CC   and for the treatment of cancer, especially colon cancer and metastasized
CC   colon cancer, but also breast or pancreatic cancer. The polynucleotides
CC   are also useful as a source of probes or primers for use in diagnostic
CC   methods. The differentially expressed polynucleotides or their encoded
CC   proteins can additionally be used as vaccines to modulate primary immune
CC   responses for the prevention or treatment of cancer. The present sequence
CC   represents a specifically claimed polynucleotide which is differentially
CC   expressed in colon cancer. Note: The sequence data for this patent did
CC   not form part of the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PS   Claim 4; Page 37; 50pp; English.
XX
CC   The invention relates to isolated polypeptides comprising PELP1 (Proline,
CC   glutamic acid and leucine rich protein 1) and encoding nucleic acids.
CC   Also described are: (i) a PELP1-specific antibody; (ii) a siRNA (short
CC   interfering RNA) capable of disrupting PELP1 activity; (iii) a
CC   peptidomimetic capable of disrupting PELP1 activity; (iv) a
CC   pharmaceutical composition comprising the isolated polypeptide, siRNA,
CC   peptidomimetic or PELP1-specific antibody and a carrier. The polypeptide
CC   is useful in preparing a composition for diagnosing or treating
CC   tumorigenesis in estrogen-responsive cell types. The composition
```

```
CC   comprising the isolated polypeptide, siRNA, peptidomimetic or PELP1-
CC   specific antibody and a carrier capable of all disrupting PELP1 (Proline,
CC   glutamic acid and leucine rich protein 1) activity is used to slow or
CC   halt tumorigenesis. The present sequence represents DNA encoding the C-
CC   terminus of human PELP1.

PT   New nucleic acid molecule encoding a polypeptide capable of at least
PT   partially complementing the phenotype of an animal having the anx/anx
PT   genotype, useful for controlling and regulating weight gain and food
PT   intake in humans.
XX
PS   Disclosure; Fig 13; 314pp; English.
XX
CC   The present invention relates to an isolated nucleic acid molecule
CC   comprising a nucleotide sequence derived from a vertebrate animal (e.g.
CC   mouse), and encodes a polypeptide capable of at least partially
CC   complementing the phenotype of an animal having the anorexia/anorexia
CC   (anx/anx) genotype. The nucleic acid molecule and the polypeptide encoded
CC   by the nucleotide sequence is useful for controlling food or feed intake,
CC   or body weight in animals including humans. The polynucleotide and
CC   polypeptide sequences of the invention are useful for regulating and
CC   controlling weight gain and food intake in animals particularly humans.
CC   The polypeptide sequences are also useful for generating monoclonal or
CC   polyclonal antibodies. The antibodies are useful for diagnostic and
CC   therapeutic purposes. These antibodies can be used in an immunoassay for
CC   identification or detection of the polypeptides. The polynucleotide
CC   sequences are useful for recombinant production of large quantities of
CC   the receptor, for further studies into the mechanism of regulation of
CC   food intake and/or body weight and for obtaining agonists and
CC   antagonists. ABS65557-ABS65762 represent mouse gene sequences relating to
CC   the present invention. The gene sequences are located on mouse chromosome

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

            Young,A., Zhang,L.-H. and Green,E.D.

            Clone distribution: MGC clone distribution information can be found
            through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
            Series: IRAK Plate: 82 Row: m Column: 5
            This clone was selected for full length sequencing because it
            passed the following selection criteria: Hexamer frequency ORF
            analysis, Similarity but not identity to protein.

COMMENT     Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
            Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de;
            sequenced by EMBL (European Molecular Biology Laboratories,
            Heidelberg/Germany) within the cDNA sequencing consortium of the
            German Genome Project.
            This clone (DKFZp686M03226) is available at the RZPD in Berlin.
            Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
            Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de Further
            information about the clone and the sequencing project is available
            at http://mips.gsf.de/proj/cDNA/.

            Clone distribution: MGC clone distribution information can be found
            through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
            Series: IRAK Plate: 131 Row: l Column: 7
            This clone was selected for full length sequencing because it
            passed the following selection criteria: Hexamer frequency ORF
            analysis, Similarity but not identity to protein.

            ------------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 16 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    49777: contig of 49777 bp in length

            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1519: contig of 1519 bp in length
            *     1520     1619: gap of unknown length
            *     1620    12491: contig of 10872 bp in length
            *    12492    12591: gap of unknown length
            *    12592    50864: contig of 38273 bp in length
            *    50865    50964: gap of unknown length
            *    50965   100974: contig of 50010 bp in length
            *   100975   101074: gap of unknown length
            *   101075   247243: contig of 146169 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Jul 26, 2001 this sequence version replaced gi:14715364.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            RP11-203B9 is from the library RPCI-11.1 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm

            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:24819438.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GHSM
                Center clone name: CH230-20C17
            -------------- Summary Statistics
                Assembly program: Atlas 3.0;
                Consensus quality: 228658 bases at least Q40
                Consensus quality: 230528 bases at least Q30
                Consensus quality: 231587 bases at least Q20
                Estimated insert size: 238639; sum-of-contigs estimation
                Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *         1   235278: contig of 235278 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (26-SEP-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Sep 26, 2002 this sequence version replaced gi:21729246.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequening reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/).  As a result, the
            sequence may extend beyond the ends of the clone and there may be
            contigs that consist entirely of whole genome shotgun sequence
            reads.  Both end sequences and whole genome shotgun sequence only
            contigs will be indicated in the feature table.
            -------------- Genome Center
                Center: Baylor College of Medicine

                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GGIS
                Center clone name: CH230-168C19
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 215469 bases at least Q40
                Consensus quality: 221003 bases at least Q30
                Consensus quality: 224760 bases at least Q20
                Estimated insert size: 262408; sum-of-contigs estimation
                Quality coverage: 4x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
            * NOTE: This sequence may represent more than one clone.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 19 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   100680: contig of 100680 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (01-JUL-2005) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Jun 29, 2005 this sequence version replaced gi:66955947.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM

                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: FFBZ
                Center clone name: CH240-79H13
            -------------- Summary Statistics
                Assembly program: Atlas 3.0;
                Consensus quality: 236819 bases at least Q40
                Consensus quality: 239101 bases at least Q30
                Consensus quality: 241053 bases at least Q20
                Estimated insert size: 239811; sum-of-contigs estimation
                Quality coverage: 5x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 25 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

COMMENT     BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST Gallus gallus cDNA
            sequencing project.
            This sequence is from the
            BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST cDNA collection,
            from a library constructed by Elizabeth Bosch. cDNA was prepared
            from RNA extracted from whole embryo, normalised, and poly
            A-trimmed. EcoRI-NotI cut cDNA was then ligated into the vector.
            Vector: pBluescript II KS(+); Site_1: EcoRI; Site_2: NotI Host:
            Escherichia coli DH10B.

            CB10 1SA, UK. E-mail enquiries: chickest@bms.umist.ac.uk
COMMENT     On Apr 1, 2004 this sequence version replaced gi:41632798.
            BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST Gallus gallus cDNA
            sequencing project.
            This sequence is from the
            BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST cDNA collection,
            from a library constructed by Elizabeth Bosch. cDNA was prepared
            from RNA extracted from heart, normalised, and poly A-trimmed.
            EcoRI-NotI cut cDNA was then ligated into the vector. Vector:
            pBluescript II KS(+); Site_1: EcoRI; Site_2: NotI Host: Escherichia
            coli DH10B.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Aug 9, 2001 this sequence version replaced gi:14970375.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr1
            RP11-229A19 is from the library RPCI-11.1 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: vega@sanger.ac.uk
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

            Clone distribution: MGC clone distribution information can be found
            through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
            Series: IRAK Plate: 153 Row: g Column: 18
            This clone was selected for full length sequencing because it
            passed the following selection criteria: Hexamer frequency ORF
            analysis, Similarity but not identity to protein.

  TITLE     Direct Submission
  JOURNAL   Submitted (01-JUL-2005) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Jun 28, 2005 this sequence version replaced gi:58082191.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

-------------- Project Information
    Center project name: FCOW
    Center clone name: CH240-47J1
-------------- Summary Statistics
    Assembly program: Atlas 3.0;
    Consensus quality: 263799 bases at least Q40
    Consensus quality: 267653 bases at least Q30
    Consensus quality: 270844 bases at least Q20
    Estimated insert size: 259829; sum-of-contigs estimation
    Quality coverage: 5x in Q20 bases; sum-of-contigs estimation
--------------
* NOTE: Estimated insert size may differ from sequence length
*   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
* NOTE: This sequence may represent more than one clone.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 47 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*       1     2106: contig of 2106 bp in length
*    2107     2176: gap of 70 bp

  JOURNAL   Submitted (22-AUG-1997) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     The Staden databases, finishing information, and all
            chromatographic files used in the assembly of this clone are
            available from our anonymous ftp site.

            All repeats were identified using RepeatMasker: Smit, A.F.A. &
            Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 11 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     3993: contig of 3993 bp in length
            *                   gap of unknown length
            *     3994     6023: contig of 2030 bp in length
            *                   gap of unknown length
            *     6024    21986: contig of 15963 bp in length
            *                   gap of unknown length
            *    21987    26296: contig of 4310 bp in length
            *                   gap of unknown length
            *    26297    30564: contig of 4268 bp in length
            *                   gap of unknown length
            *    30565    42164: contig of 11600 bp in length
            *                   gap of unknown length
            *    42165    51729: contig of 9565 bp in length
            *                   gap of unknown length
            *    51730    78333: contig of 26604 bp in length
            *                   gap of unknown length
            *    78334    81497: contig of 3164 bp in length
            *                   gap of unknown length
            *    81498    83990: contig of 2493 bp in length
            *                   gap of unknown length
            *    83991    86945: contig of 2955 bp in length.

  TITLE   Direct Submission
  JOURNAL Submitted (15-NOV-2002) Human Genome Sequencing Center, Department
          of Molecular and Human Genetics, Baylor College of Medicine, One
          Baylor Plaza, Houston, TX 77030, USA
COMMENT   On Nov 15, 2002 this sequence version replaced gi:23810271.
          The sequence in this assembly is a combination of BAC based reads
          and whole genome shotgun sequencing reads assembled using Atlas
          (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
          in the feature table below represents a scaffold in the Atlas
          assembly (a 'contig-scaffold'). Within each contig-scaffold,
          individual sequence contigs are ordered and oriented, and separated
          by sized gaps filled with Ns to the estimated size. The sequence
          may extend beyond the ends of the clone and there may be sequence
          contigs within a contig-scaffold that consist entirely of whole
          genome shotgun sequence reads. Both end sequences and whole genome
          shotgun sequence only contigs will be indicated in the feature
          table.
          -------------- Genome Center
              Center: Baylor College of Medicine
              Center code: BCM
              Web site: http://www.hgsc.bcm.tmc.edu/
              Contact: hgsc-help@bcm.tmc.edu
          -------------- Project Information
              Center project name: GUVV
              Center clone name: CH230-292B6
          -------------- Summary Statistics
              Assembly program: Phrap; version 0.990329
              Consensus quality: 220256 bases at least Q40
              Consensus quality: 221805 bases at least Q30
              Consensus quality: 222900 bases at least Q20
              Estimated insert size: 228346; sum-of-contigs estimation
              Quality coverage: 8x in Q20 bases; sum-of-contigs estimation
          --------------
          * NOTE: Estimated insert size may differ from sequence length
          *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 1 contigs. Gaps between the contigs
          * are represented as runs of N. The order of the pieces
          * is believed to be correct as given, however the sizes
          * of the gaps between them are based on estimates that have
          * provided by the submittor.
          * This sequence will be replaced
          * by the finished sequence as soon as it is available and
          * the accession number will be preserved.
          *       1   227406: contig of 227406 bp in length.

            Summary Statistics
            Consensus quality: 232263 bases at least Q40
            Consensus quality: 233529 bases at least Q30
            Consensus quality: 234333 bases at least Q20
            Estimated insert size: 254000; agarose-fp estimation
            Estimated insert size: 234890; sum-of-contigs estimation
            Quality coverage:  10.53 in Q20 bases; agarose-fp estimation
            Quality coverage:  11.39 in Q20 bases; sum-of-contigs estimation.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 12 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1     4675: contig of 4675 bp in length

TITLE Direct Submission
JOURNAL Submitted (21-SEP-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Sep 21, 2002 this sequence version replaced gi:21908122.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequening reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

---------- Project Information
Center project name: GXZE
Center clone name: CH230-54I13
---------- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 217571 bases at least Q40
Consensus quality: 219475 bases at least Q30
Consensus quality: 220633 bases at least Q20
Estimated insert size: 237562; sum-of-contigs estimation
Quality coverage: 4x in Q20 bases; sum-of-contigs estimation
---------- * NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 3 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 247947: contig of 247947 bp in length
* 247948 248047: gap of unknown length
* 248048 249438: contig of 1391 bp in length
* 249439 249538: gap of unknown length
* 249539 251186: contig of 1648 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 13, 2002 this sequence version replaced gi:23269965.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM

                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GSKI
                Center clone name: CH230-172M3
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 239973 bases at least Q40
                Consensus quality: 244429 bases at least Q30
                Consensus quality: 247205 bases at least Q20
                Estimated insert size: 238981; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 13 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

SFO251359
LOCUS       SFO251359               7422 bp    RNA     linear   VRL 15-APR-2005
DEFINITION  Semliki Forest virus ORF1, genomic RNA, clone SFV4.
ACCESSION   AJ251359
VERSION     AJ251359.1  GI:6523490
KEYWORDS    nonstructural protein; NSP gene; NSP1; NSP2; NSP3; NSP4;
            polyprotein nsP1234.
SOURCE      Semliki forest virus
  ORGANISM  Semliki forest virus
            Viruses; ssRNA positive-strand viruses, no DNA stage; Togaviridae;
            Alphavirus; SFV complex.

COMMENT     On Nov 11, 2004 this sequence version replaced gi:54312159.
            -------------- Genome Center
                 Center: NIH Intramural Sequencing Center
                 Center code: NISC
                 Web site: http://www.nisc.nih.gov
                 Contact: nisc_zoo@nhgri.nih.gov
            -------------- Project Information
                 Center project name: ifi
                 Center clone name: 012D21

            The sequence data in this record represents an 'enhanced'
            version of a Phase 2 submission. Specifically, the indicated
            order and orientation of each sequence contig has been
            established using one or more of the following: read-pair
            data from individual subclones, overlaps with neighboring
            clones, alignment with available reference sequence (e.g.,
            human), and/or confirmation by PCR testing. In addition,
            the sequence assembly is based on at least 8X average
            coverage in Q20 bases and has been reviewed to rule out
            gross misassemblies, the low-quality ends of sequence
            contigs have been trimmed away, and each base is associated
            with a Phrap-derived quality score.
            -------------- Summary Statistics
                 Sequencing vector: plasmid; n/a; 100% of reads
                 Chemistry: Dye-terminator Big Dye; 100% of reads
                 Assembly program: Phrap; version 0.990319
                 Consensus quality: 149480 bases at least Q40
                 Consensus quality: 149754 bases at least Q30
                 Consensus quality: 149909 bases at least Q20
                 Insert size: 155000; agarose-fp
                 Insert size: 149944; sum-of-contigs
                 Quality coverage: 9.52x in Q20 bases; agarose-fp
                 Quality coverage: 9.84x in Q20 bases; sum-of-contigs
            --------------
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *        1    36273: contig of 36273 bp in length
            *    36274    36373: gap of unknown length
            *    36374    55049: contig of 18676 bp in length
            *    55050    55149: gap of unknown length
            *    55150   101939: contig of 46790 bp in length
            *   101940   102039: gap of unknown length
            *   102040   114806: contig of 12767 bp in length
            *   114807   114906: gap of unknown length
            *   114907   150344: contig of 35438 bp in length.

COMMENT     This clone is available royalty-free through IMAGE Consortium
            Distributors. IMPORTANT: This sequence represents the full insert
            of this IMAGE cDNA clone. No attempt has been made to verify
            whether this corresponds to the full-length of the original mRNA
            from which it was derived.

COMMENT     Sanger Xenopus tropicalis EST/cDNA project.
            This sequence is from a Xenopus Gene Collection (XGC) library, from
            a library constructed by Aaron M. Zorn. cDNA was prepared from RNA
            extracted from gastrula embryos. EcoRI-NotI cut cDNA was then
            ligated into pCS107 with EcoRI at the 5' end and NotI at the 3'
            end.
            Vector: pCS107; Site_1: EcoRI; Site_2: NotI
            Host: Escherichia coli XL1-blue.

AL589699
LOCUS       AL589699                256608 bp    DNA     linear   ROD 17-DEC-2004
DEFINITION  Mouse DNA sequence from clone RP23-92G13 on chromosome 13 Contains
            the 3' end of the gene for a novel protein similar to KIAA0386,
            five novel genes, the Gmnn gene for geminin, gene PNAS-27, the
            Ttrap gene for Traf and Tnf receptor associated protein, the gene
            for a novel protein similar to KIAA0319, the gene for the ortholog
            of human and rat aldehyde dehydrogenase 5A1 (succinate-semialdehyde
            dehydrogenase) (ALDH5A1) (SSADH), the 5' end of the Gpld1 gene for
            glycosylphosphatidylinositol specific phospholipase D1 and four CpG
            islands, complete sequence.
ACCESSION   AL589699
VERSION     AL589699.4  GI:13810107
KEYWORDS    HTG; Aldh5a1; CpG island; geminin; Gmnn; Gpld1; KIAA0319; KIAA0386;

  TITLE     Direct Submission
  JOURNAL   Submitted (16-DEC-2004) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Apr 26, 2001 this sequence version replaced gi:13751568.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep ----------
            Genome Center
            Center: UK Medical Research Council
            Center code: UK-MRC
            Web site: http://mrcseq.har.mrc.ac.uk
            Contact: mouseq@har.mrc.ac.uk
            ----------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.
            Sequence from the Mouse Genome Sequencing Consortium whole genome
            shotgun may have been used to confirm this sequence.  Sequence data
            from the whole genome shotgun alone has only been used where it has
            a phred quality of at least 30.
            RP23-92G13 is from the RPCI-23 Mouse BAC Library
            constructed by the group of Pieter de Jong.
            For further details see http://www.chori.org/bacpac/home.htm

HS30M3
LOCUS       HS30M3                 102200 bp    DNA     linear   PRI 18-MAY-2005
DEFINITION  Human DNA sequence from clone RP1-30M3 on chromosome 6p22.1-22.3
            Contains the 5' end of gene KIAA0319, the gene for TRAF and TNF
            receptor-associated protein (TTRAP)(EAP2, AD022, MGC9099), gene
            FLJ20501, the 3' end of gene FLJ12619 (DKFZP564G182) and two CpG
            islands, complete sequence.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Dec 29, 1998 this sequence version replaced gi:4007165.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            RP1-30M3 is from the library RPCI-1 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pCYPAC2

            ----------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at

TITLE Direct Submission
JOURNAL Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On May 13, 2003 this sequence version replaced gi:23265926.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
---------- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
---------- Project Information
Center project name: GJVU
Center clone name: CH230-42H3
---------- Summary Statistics
Assembly program: Atlas 3.0;
Consensus quality: 238380 bases at least Q40
Consensus quality: 239660 bases at least Q30
Consensus quality: 240760 bases at least Q20
Estimated insert size: 255581; sum-of-contigs estimation
Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
* NOTE: This sequence may represent more than one clone.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 2 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 242009: contig of 242009 bp in length
* 242010 242109: gap of unknown length
* 242110 245394: contig of 3285 bp in length.

COMMENT     On Apr 30, 2005 this sequence version replaced gi:61673710.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: zfish-help@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            Repeat names beginning 'Dr' were identified by the Recon repeat
            discovery system (Zhirong Bao and Sean Eddy, submitted), and those
            beginning 'drr' were identified by Rick Waterman (Stephen Johnson
            lab, WashU).  For further information see
            http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml DKEY-218N20
            is from a Zebrafish BAC library
            VECTOR: pIndigoBAC-5.

COMMENT     On Feb 25, 2004 this sequence version replaced gi:42538803.
            ------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: zfish-help@sanger.ac.uk
            -------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            Repeat names beginning 'Dr' were identified by the Recon repeat
            discovery system (Zhirong Bao and Sean Eddy, submitted), and those
            beginning 'drr' were identified by Rick Waterman (Stephen Johnson
            lab, WashU).  For further information see
            http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml CH211-81E5
            is from a CHORI-211 BAC library
            VECTOR: pTARBAC2.1.

COMMENT This clone sequence is one of 5,000 Ceres full-length cDNAs made available to TIGR and Genbank. The following quality assessment of this set was done by comparison with known proteins: two percent of the clones are estimated to be 5'-truncated; less than one percent are 3'-truncated; approximately two percent represent alternative splice variants, including unspliced introns and spliced exons; one percent may contain premature stop codons; five percent may have frame shifts in a coding region. A sequence is considered to be 5'-truncated if it lacks the translation initiation start (ATG). A sequence is considered to be 3'-truncated if it lacks the C-terminal end of the encoded protein. Please note that these cDNA sequences are derived from the Ws or LAer ecotypes and therefore may contain polymorphisms when compared to sequences from Col-0. Genset carried out the library production and sequencing of the full-length clones. Ceres, Inc. carried out the clustering of the 5' sequences, selection of clones, and sequence assembly.

  TITLE Arabidopsis thaliana chromosome 1 BAC F25C20 sequence
  JOURNAL Unpublished (1999)
  REMARK This sequence is of BAC F25C20 from Arabidopsis thaliana chromosome 1. The sequence does not represent the sequence of the entire insert of this clone. It is shorter by 1656 bp because we submit only the unique sequence of the clone. However, in order to facilitate the joining of overlapping clones in the future for creation of larger contigs, we provide a small overlap (200 bp) between overlapping submitted clones. The 5' end of this sequence overlaps by 200 bp the 3' end of the sequence of the BAC F12F1.
REFERENCE 2 (bases 1 to 91566)

            Genetics, Washington University, St. Louis, MO 63110, USA. E-mail:
            worm@sanger.ac.uk
COMMENT     On May 14, 2001 this sequence version replaced gi:3646980.
            Coding sequences below are predicted from computer analysis, using
            predictions from Genefinder (P. Green, U. Washington), and other
            available information.
            Current sequence finishing criteria for the C. elegans genome
            sequencing consortium are that all bases are either sequenced
            unambiguously on both strands, or on a single strand with both a
            dye primer and dye terminator reaction, from distinct subclones.
            Exceptions are indicated by an explicit note.
            IMPORTANT:  This sequence is NOT necessarily the entire insert of
            the specified clone.  It may be shorter because we only sequence
            overlapping sections once, or longer because we arrange for a small
            overlap between neighbouring submissions.
            For a graphical representation of this sequence and its analysis
            see:- http://www.wormbase.org/perl/ace/elegans/seq/sequence?
            name=Y63D3A;class=Sequence
            IMPORTANT: This sequence is not the entire insert of clone Y63D3A.
            It may be shorter because we only sequence overlapping sections
            once, or longer because we arrange for a small overlap between
            neighbouring submissions.
            The true left end of clone K03D10 is at 33796 in this sequence. The
            true right end of clone F47G4 is at 103 in this sequence. The true
            right end of clone Y71A12 is at 113 in this sequence. The start of
            this sequence (1. .103) overlaps with the end of sequence Z99171.
            The end of this sequence (33796. .33899) overlaps with the start of
            sequence Z81561.

            ---------------
            The following sequence is oriented from the T7 to the SP6 end. The
            nucleotide sequence of this BAC clone was generated by combining
            Syngenta and Genoscope sequencing data.
            Upstream BAC (overlapping the T7 end) : OSJNBa0017G24 (AC=AL928777)
            Downstream BAC (overlapping the SP6 end) : OSJNBa0032G05
            (AC=AL831800) ---------- Finishing boundaries
            FINISHED SEGMENT STARTS AT BASE 5830
            FINISHED SEGMENT ENDS AT BASE 100667

COMMENT     On Jun 28, 2005 this sequence version replaced gi:58531393.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

                Consensus quality: 226361 bases at least Q30
                Consensus quality: 227836 bases at least Q20
                Estimated insert size: 228962; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 21 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

COMMENT BAC clone RPCI93-27M11 from Trypanosoma brucei chromosome 7.

Putative protein coding regions (>30 codons) were predicted by combining the output of the gene finding algorithm GLIMMER with similarity data and manual annotation of open reading frames. Further refinement of gene models (additions, deletions and alterations to boundary coordinates) were done manually based on detailed comparisons with the T. cruzi and L. major genomes. Genes on BACs were assigned a systematic name based on the chromosome and the BAC from which they originated (e.g. Tb03.27F10.410). Gene products were assigned a putative function when they shared significant similarity with experimentally characterized gene products or when they contained functionally known protein domains. Gene products were labelled either 'hypothetical protein', or 'hypothetical protein, conserved' in the case of products showing significant similarity with proteins or domains of unknown function from other organisms. Gene products of unknown function with predicted orthologs in Trypanosoma cruzi and Leishmania major genomes were automatically classified as conserved proteins. Short predicted coding sequences (less than 150 codons) with no additional evidence of coding potential were labelled 'hypothetical protein, unlikely'.

            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 8 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    33759: contig of 33759 bp in length

            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Repeat names
            beginning 'Dr' were identified by the Recon repeat discovery system
            (Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr'
            were identified by Rick Waterman (Stephen Johnson lab, WashU). For
            further information see http://www/Projects/D_rerio/fishmask.shtml
            CH211-235E9 is from a CHORI-211 BAC library
            VECTOR: pTARBAC2.1.

            Contact: zfish-help@sanger.ac.uk
            -------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Repeat names
            beginning 'Dr' were identified by the Recon repeat discovery system
            (Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr'
            were identified by Rick Waterman (Stephen Johnson lab, WashU). For
            further information see http://www/Projects/D_rerio/fishmask.shtml
            DKEY-87L3 is from a Zebrafish BAC library
            VECTOR: pIndigoBAC-5.

                     /note="Organ: blood; Vector: Lambda ZAP II; Site_1: EcoRI;
                     Site_2: EcoRI; 65,000 proliferating erythroid cells from
                     the buffy coat of a blood donation were obtained by flow
                     cytometric separation after a 5-day culture period in the
                     presence of erythropoietin. Total RNA was purified from
                     the sorted cell population using TRIzol reagent. RNA (0.3
                     ug) was converted into double stranded cDNA using
                     Clontech's CapFinder cDNA Library Construction Kit
                     (Clontech) according to the manufacturer's protocol and
                     cloned into EcoRI digested Lambda Zap II vector
                     (Stratagene). The phage library was amplified once prior
                     to in vivo excision in SOLR cells. Individual colonies
                     were grown, and the cDNA inserts were sequenced in high
                     throughput (NIH intramural sequencing center
                     http://www.nisc.nih.gov/)."

                     /clone_lib="Hembase; Erythroid Progenitor Cells (LCB:ax
                     library)"
                     /note="Organ: blood; Vector: Lambda ZAP II; Site_1: EcoRI;
                     Site_2: EcoRI; 65,000 proliferating erythroid cells from
                     the buffy coat of a blood donation were obtained by flow
                     cytometric separation after a 5-day culture period in the
                     presence of erythropoietin. Total RNA was purified from
                     the sorted cell population using TRIzol reagent. RNA (0.3
                     ug) was converted into double stranded cDNA using
                     Clontech's CapFinder cDNA Library Construction Kit
                     (Clontech) according to the manufacturer's protocol and
                     cloned into EcoRI digested Lambda Zap II vector
                     (Stratagene). The phage library was amplified once prior
                     to in vivo excision in SOLR cells. Individual colonies
                     were grown, and the cDNA inserts were sequenced in high
                     throughput (NIH intramural sequencing center
                     http://www.nisc.nih.gov/)."

                     /note="Organ: Stomach; Vector: pME18-FL3; Site_1: XhoI;
                     Site_2: XhoI; The poly (A)+ RNA was dephosphorylated with
                     bacterial alkaline phosphatase (BAP) and then decapped
                     with tabacco acid pyrophosphatase (TAP). The decapped
                     intact mRNA was ligated with DNA-RNA linker including SfiI
                     site by treatment of T4 RNA ligase and the first strand
                     cDNA was synthesized with Superscript II using SfiI
                     oligo-dT primer. After first strand synthesis, RNA was
                     degraded by NaOH treatment and cDNA was amplified by PCR
                     reaction. The PCR products were digested with SfiI and
                     cloned into DraIII- digested pME18S-FL3 vector. The
                     obtained cDNA vectors were used for transformation of
                     competent cells E. coli Top10F' by electroporation method.
                     The cDNA libraries constructed by this method are
                     full-length enriched cDNA library."
